Why formulier is real organic & natural skincare cosmetics like no other

COSMOS ORGANIC & NATURAL

Formulier 'Organic & Natural line' is COSMOS certified cosmetic. COSMOS-ORGANIC & NATURAL has been developed at the international level by 5 different certificate authorities from 4 countries in Europe to define common requirements and definitions for organic & natural cosmetics.

VEGAN CERTIFICATE

VEGAN CERTIFICATE is to define a product as the one which does not contain any animal ingredients or animal-derived ingredients. It suggests the strong standard of cruelty free and cross contamination and contact during manufacturing and distribution. (Sun cream exception)

DERMA TEST

As an independent dermatology institute, Dermatest® is widely known and respected for its strict and rigorous standard. Dermatest® guarantees you the maximum possible safety for your skin by its comprehensive and properly structured testing on cosmetic products. All the products of Formulier the organic & natural series are rated "EXCELLENT" grade by Dermatest®.

IRRITATION TESTED

'The organic' of Formulier is a safe & mild skincare series that can also be used by those with sensitive and dry skin. Our products are tested by KTR (Korea Testing & Research Institute) and found to be products within non-irritating cosmetics category. (Ampoule, Oil cream exception)

BIODEGRADATION

All the skin items of Formulier the organic are selectively using bio-degradable ingredients to minimize the influence on environment. Formulier pursues good cosmetic formula for coexistence of human, environment and animals.

MFDS APPROVED

Adenosine is one of the ingredients notified by MFDS as anti-wrinkle ingredient. We increase skin absorption of adenosine by applying liposome process to water-soluble adenosine. It is found in the fine wrinkle clinical test that there is 72% improvement.

SUSTAINABLE

Formulier 'the organic' are using the paper materials with FSC certification and soy ink to protect nature. FSC is an international certification for the responsible and sustainable forest management. Soy ink reduces environmental pollution of VOC by less use of ink usage.
